PROFESSIONAL SUMMARY

Results-driven Data Scientist with expertise in machine learning, GenAI, large language models (LLMs), RAG systems, statistical analysis and big data technologies. Skilled in developing predictive models, NLP and building LLM-powered applications with experience in deploying deep learning models and applying robust evaluation practices. Proficient in optimizing data pipelines & data visualizations to drive data-driven decision-making and scalable AI solutions that enhance business outcomes.

EXPERIENCE

Data Scientist

Jun 2023 - Present

Spirent Communications

Washington, DC

- Led Spirent's Support Chatbot, developing Retrieval-Augmented Generation (RAG) pipeline with Claude 4.0 API integration with S3 Vectors for high dimensional vector indexing and similarity search, achieving 92% response accuracy.
- Engineered Competitive Intelligence platform utilizing graph enhanced hybrid retrieval to fuse external & internal data, driving product specific insights (strengths/risks/opportunities) and improving visibility into competitor activity & market by 53%.
- Architected GenAI project intelligence platform with assistant using vector embeddings and RAG workflows, plus explainable portfolio health analytics to automate project visibility, surface early risk for 10+ projects and reduce manual effort by 65%.
- Validated forecasting, risk and GenAI models using backtesting, explainability and retrieval optimization.
- Orchestrated risk analyzer using K-means clustering with Redshift ML to identify and prioritize high-risk opportunities, leading to 23% boost in sales productivity through optimized resource allocation.
- Innovated Product Insights Assistant utilizing GPT-4o and Snaplogic to analyze support cases, empowering product teams to resolve recurring issues pre-launch and reduce post-launch support tickets by 22%.
- Deployed XGBoost to forecast sales opportunities achieving 9% MAPE, empowering data-driven optimization in sales strategy.
- Constructed an AWS data lakehouse, harnessing Redshift and S3 to optimize data management with a 33% efficiency gain.
- Pioneered Asset Management QuickSight dashboard, uncovering \$1M+ expired contracts, boosting renewal efficiency by 51%.
- Developed Revenue Recognition dashboard in QuickSight automating Finance reporting workflows, saving 2 days of reporting time and eliminating manual effort.
- Revamped support operations by integrating Alteryx with Tableau and SQL Server, saving 2 hours on each ad-hoc report.

Data Science Intern

Jun 2022 - Sep 2022

Rotor Technologies Inc.

Nashua, NH

- Built end-to-end data science pipeline including SQL schema optimization (48% redundancy reduction), BERT-based text classification for aircraft service categories (92% accuracy, 40% faster runtime), and Power BI dashboards, improving team productivity by 21% and reducing manual effort by 43%.

Data Scientist

Sep 2020 - Aug 2021

Aliste Technologies

Ahmedabad, India

- Conducted KPI analysis using Random Forest, enhancing 14% sales by identifying high potential customer segments.
- Implemented a predictive maintenance system using CNNs and Flask based Rest APIs, cutting 19% in repair costs.
- Enhanced user satisfaction by 32% using personalized smart home recommendations by deploying Q-learning.
- Automated CI/CD pipelines for ML models with AWS SageMaker, cutting deployment time from 3 days to 3 hours.
- Improved energy efficiency in home automation using XGBoost, resulting in 27% reduction in energy consumption.

PROJECTS

Spotify QueryPilot

- Developed AI powered analytics app using multi-provider LLM integration with schema-aware few-shot prompting to convert natural language into SQL on 90K track Spotify dataset, achieving 90% execution success and 96.2% semantic accuracy.
- Engineered 4-layer SQL validation pipeline with SQLGlot parsing, DuckDB dry-run verification, and intelligent auto-visualization across 8 Plotly chart types, delivering executive-ready business narratives under 10 seconds per query.

EDUCATION

Northeastern University

Boston, MA

Master of Science, Data Analytics Engineering

Sep 2021 - May 2023

Gujarat Technological University

Ahmedabad, India

Bachelor in Engineering, Electronics and Communication Engineering

Aug 2017 - May 2021

SKILLS

Certification

Oracle Cloud Infrastructure 2024 Generative AI Professional

Programming Languages

Python, R, Java, C++, Scala, MATLAB

Generative AI

LLM Integration, Prompt Engineering, Retrieval-Augmented Generation (RAG), Vector Search, Knowledge Graphs, LLM Optimization, Conversational AI Systems, AI System Design

Libraries

TensorFlow, Keras, PyTorch, OpenCV, NLTK, spaCy, Scikit-learn, Seaborn, Matplotlib, NumPy

Databases

Snowflake, Redshift, SQL Server, PostgreSQL, MongoDB, DynamoDB, Excel, Databricks

Big Data Tools

SnapLogic, Hadoop, MapReduce, Hive, Spark, Airflow, Kafka, Cassandra

Web Technologies

HTML, CSS, ReactJS, Neo4j, Flask, RESTful API

Technologies

Power BI, Tableau, QuickSight, Qlik, Looker, Google Analytics, Alteryx, Git
